cap. Attaches to your 12 volt source and allows you to charge USB accessories.

What is a true 4.8 Amps?

Many charger are nominally rated or not rated at all. Other charging socket output 1, 2.1, 3.1, 4.2 Amps, but these rating may only represent the maximum peak output rating and can not sustain that output for a prolonged period. Our chargers, including this one, at 4.8 amps, are true rated which means they can maintain the rated output current for an indefinite period. This allows you to charge your USB accessories at maximum power up to 30% faster. This charger's output is the highest in the industry. Each of the dual port can output a true 2.4 amps. Should your device require more than 2.4 amps the power is distributed as need to the individual ports up to 4.8 amps.

The socket body and charger are one piece, designed for outside use. The heavy weatherproof cap fits into and snaps over the front of the charger to keep moisture out when not in use. This cap, unlike other caps, covers all of the individual USB port openings. The rubber washer provide a waterproof seal and vibration resistant panel mount. The socket has 0.250 male spade type terminals for easy wire connections.

No LED, means less power consumption.

This charger is rated for 4.8 amps 5 amps peak at 5 V and can accept two USB devices.

The socket fits in a 1-1/8" hole in panels up to 1-1/4 inch thick with the backing nut. Mounting plate allows for mounting in panels of unlimited thickness.

Highest Power, Integrated one piece construction, true 4.8 amp (5 amp peak) dual USB charging socket, rubber sealing washer, and heavy weather sealing cap. Now with harness fused and terminated to fit the charger and battery. #PAHRNA

Rubber washer acts as a locking washer to prevent the nut from coming loose in high vibration installations.

Ships from the USA.

Charges two iPods or two iPhones at the same time at full power.

This listing is for one USB dual charger socket with weatherproof
